Mounting instructions for pipe couplings DVK-HD® high pressure

Edited by on 1. Feb. 2024

When mounting pipes with our DVK-HD® pipe couplings, it is important to ensure that the pipe coupling is protected against shifting by means of suitable pipe clamps / wall brackets or mounts (made by Hilti or Müpro).

The pipe coupling can seal the pipe up to the specified pressure, but cannot protect it against movement or shifting.

All DVK-HD® couplings are suitable for pneumatic or vacuum transportation (not for liquids!).

DVK-HD® couplings are supplied ready for assembly.
