DELKOR India signs 2 mtpa Iron Ore Processing Plant Contract with Kalpataru Projects

Bearbeitet von am 3. Aug. 2023

Leipzig, Deutschland –

Entrenching DELKOR's plants and process island capabilities, this latest order will leverage DELKOR's beneficiation design, engineering and procurement services to supply all major and strategic process equipment for a 2.0 mtpa iron ore processing plant for NMDC.

DELKOR India recently signed a tripartite agreement with Kalpataru and NMDC making it the licensor of the beneficiation technology for this important iron ore processing plant.

Kalpataru, founded in 1969, is one of India's leading infrastructure and real estate companies in India with interests in power transmission and distribution, civil infrastructure, industrial projects and logistics. NMDC, incorporated in 1958 as a public sector company of the Government of India, is the country's largest producer of iron ore and ranked sixth globally. As a Navratna entity, NMDC has also been bestowed a prestigious status, given to only a few select Indian Public Sector Undertakings (PSUs), and as such boast enhanced financial autonomy.

The project includes not only the supply of technology but engineering, procurement, supply of process equipment, and supervision of the erection and commissioning of the 2.0 mtpa iron ore processing plant.

Indu Bhushan Jha, DELKOR India: Managing Director, had this to say when asked about the upcoming project: "I sincerely thank all colleagues for the hard work and effort everyone has put in. The DELKOR India team has worked closely with NMDC and Kalpataru and I am excited to see this project being successfully implemented because it will only solidify DELKOR's position as a leading global provider of plants and process island solutions – proof that it pays to talk to a specialist!"
