Lödige Coater LC

Bearbeitet von am 21. Dez. 2023

The Coating technology is developing continuously. More and more rapid processes combined with lowest spraying losses, easier handling and effective cleaning in fully automatic systems are the top-priority.

Our product line LC fulfills these requirements for a wide range of applications. This includes film coating and sugar coating- we have the perfect solution for this purpose. The Lödige Coating System LC enables extremely quick coating processes because of the maximised air volume, the optimized number of nozzles and the remarkably effective mixing in the tablet bed. All this ensures an excellent quality of the tablets and an optimal uniformity of the coating. Of course our systems can be designed for the use with organic solvents like acetone, isopropanol and ethanol.
