Metso to deliver Grinding Plant Equipment to South32 Project in USA

Bearbeitet von am 5. Jul. 2024

Helsinki, Finnland –

Metso has been awarded orders for the delivery of grinding plant equipment for South32's greenfield Hermosa project in the Patagonia Mountains in southern Arizona. The order is booked in the Minerals segment's 2024 second-quarter orders received.

Metso's scope of delivery includes a Premier™ Primary Autogenous Grinding (AG) Mill and a Vertimill® VTM-4500 Secondary Grinding Mill with the potential to supply other comminution and beneficiation process equipment technologies.

“Metso’s broad grinding technology portfolio offers the best tool for the job. In this case, primary grinding utilizing an AG Mill eliminates steel media usage and the Vertimill® in secondary grinding and regrinding improves energy efficiency and reduces steel media consumption. This is a truly Planet Positive combination,” says Christoph Hoetzel, Senior Vice President, Grinding at Metso.

“We are very pleased to be supporting South32 in their development focus to supply critical minerals like zinc and manganese in the USA. We are committed to supporting South32 in this endeavor with our Planet Positive offering and our large service group in Arizona,” says Tim Robinson, Vice President, Minerals Sales in North and Central America (NCA) at Metso.
