## **Ajax Equipment Screw Conveyors & Feeders for Thailand**

Edited by on 30. Aug. 2023

*Bolton, United Kingdom –*

Solids handling specialist, Ajax Equipment, has completed a pair of projects in Thailand; firstly supplying two food grade inclined screw conveyors for handling filter cake at the company's production facility. Following the success of this order, two horizontal twin screw feeders and a screw conveyor with inlet hopper for handling a paste-like product were supplied to the same company.

Usually, inclined screw conveyors are used to move material upwards, however, both of the Ajax stainless steel inclined screw conveyors are used transfer material downwards. The design of the conveyors, including LynFlow™ ribbon flights, promotes effective transfer of the filter cake as well as preventing the material clogging.

In the second order, both twin screw feeders include a cold water jacket to provide cooling as the material moves through. All three machines have an enhanced mirror polish finish to both the internal surface of the casing and the screws.

“Joining forces with engineers across a wide range of applications is one of the joys of working at Ajax. The professionalism of the team in Thailand made it a pleasure to work with them.

After two successful projects we look forward to working together again in the future,” says Eddie McGee, managing director, Ajax Equipment. “Over Ajax’s five decades of operation we have supplied solids handling and processing equipment all over the world and hope to continue expanding our global impact in the future.”
