## Seven Key Benefits of Dinnissen's largest-ever Mixer with Extractable Shafts

Edited by on 19. Oct. 2023

*Sevenum, Netherlands* –

With this Pegasus® MG, Dinnissen has produced its largest-ever mixer with extractable shafts. According to the manufacturer, this new machine offers seven key benefits.

This powerhouse can **(1) mix up to 7000 liters in record time, achieving perfect homogeneity.** Due to its extremely short mixing times (45-90 seconds), it also results in **(2) significantly lower energy costs.**

Manufacturers can now **(3) mix small amounts of micro-ingredients homogeneously** without the need for a premix. This step eliminates a preliminary process, **(4) reducing both operational costs** and required space.

Designed with hygiene in mind, and devoid of internal cavities, this mixer — equipped with separate bolt connections aligned with EHEDG guidelines — ensures **(5) no breakage of powder** and leaves **minimal residue.** The **(6) large front-opening hatch, complemented by extractable shafts with guides,** ensures **easy accessibility.**

These design choices result in **(7) significantly shorter cleaning times** for both the mixer and hopper, leading to considerably less downtime.
