motan-colortronic: SPECTROFLEX V - Quick exchange of the flexible dosing hopper

Edited by on 24. Oct. 2023

Exchange modules can be changed and come in different versions, such as single, double, spiral, auger. This enabled you to be able to adjust the dosing unit to type of material in just a few minutes. Material changeovers are fast and require no tools.

The complete exchange module can be used as a material cassette, allowing you to quickly change materials without any clean-down. Save money - faster material changes means more time spent in production.
