ESI Eurosilos - World largest potato starch silo

Edited by on 15. Dec. 2023

The world's largest potato starch silo is now being constructed for KMC at Karup in Denmark. KMC is a leading Danish producer of potato starch and potato flakes. ESI Eurosilos was awarded the assignment to design, produce and install the internal machinery. We designed a huge central shutter column of about 55 meters high to fit the maximum capacity of 88,500 m³ of this huge silo. Here you see an interesting time laps of the concrete foundation.

Installation of the starch silo equipment.

Production of the complete internal machinery is now on the way. The projects execution is on a very tight schedule, as the silo has to be ready for operation within this year. We are pleased to share with you an amazing time lapse video of the pouring of the concrete floor. Besides the largest potato starch silo, we are

also involved in other projects in Slovenia and Polen.
