Control Concepts Introduces FlowEZE, a new Airsweep Systems Mascot

Edited by on 20. Dec. 2023

The AirSweep® Material Activation System eliminates bridging, ratholes and buildup, providing on-demand material flow. Each powerful pulse sweeps high-pressure/high-volume bursts of compressed air/gas along the vessel wall, activating stagnant material and restoring flow.

Easy retrofit to any vessel. USDA-accepted, food grade and industrial models for virtually any material and application. The AirSweep® System provides material flow solutions for powder/bulk processes in industries such as agriculture, chemical, feed & grain, food processing, mining and metals, paper & pulp, pharmaceutical processing and more.
