Belt Change at Large Conveyor in Sichuan Yadong

Edited by on 21. Sep. 2022

This video shows a belt replacement, which BEUMER were able to carry out for their customer Yadong Cement in China at the beginning of 2019. One of the biggest challenges of this project was to meet the customer's schedule. The belt exchange took place during the Chinese New Year. This was a time window of exactly fourteen days.

Since February 2009, the system developed and installed by BEUMER has been in operation and able to ensure the continuous limestone transport between the quarry and the plant in horizontal and vertical curves, over bridges and through a tunnel, reaching a mass flow of 1,500 tons per hour and a conveying speed of 4 metres per second.
