Zachry and Mitsubishi awarded Polyethylene Unit Construction Contract in Texas

Edited by on 4. Jul. 2019

Zachry Group and its partner Mitsubishi Heavy Industries America, Inc. ("MHIA") have been selected to construct a two-train polyethylene unit that will be part of a new chemical complex near Corpus Christi, Texas. Upon completion, the complex will include a 1.8 million ton per annum (MTPA) ethane steam cracker, a 1.1 mtpa monoethylene glycol (MEG) unit, and the polyethylene unit that will be built by Zachry Group.

The complex is planned by Gulf Coast Growth Ventures (GCGV), a joint venture of ExxonMobil and Saudi Basic Industries Corporation (SABIC). Zachry Group plans to begin major construction activities in Gregory, Texas, later this year, and the polyethylene unit is expected to be completed by 2022. "We are pleased to be selected by GCGV to contribute our expertise to the project," said Ralph Biediger, Projects Group president, Zachry Group. "The award represents not only our ability to execute a project of this scale on schedule and on budget, but also that we are aligned with GCGV in our commitment to keep each person safe while doing so."

About Zachry Group

Zachry Group is North America's pacesetter in turnkey construction, engineering, maintenance, turnaround and fabrication services to the power, energy, chemicals, manufacturing and industrial sectors. We operate in more than 30 offices, and our 20,000 employees work in more than 400 locations nationwide,
