## **Sterling Systems & Controls: Automation Migration and Upgrade helps Feed Manufacturer**

Beginning in the early 1970's Sterling Systems &

Controls first provided automated controls for the feed production process. As technology advanced subsequent automation upgrades were affordably and efficiently accomplished in the 1990's and again in the second decade of the 21st century. This continuity of automation upgrade has greatly assisted the feed manufacturer by increasing process efficiency in providing feed that help livestock producers get the most out of each pound of feed and each head of livestock. Sterling is a UL listed control panel builder. This along with Sterling's expertise, deep knowledge of automation technology, and understanding of the customer's application and processes, means they are uniquely suited to

providing automation and control systems for the feed and grain related industries that stand the test of time and easily maintain technological state-of-the-art. Sterling Systems & Controls, Inc. has over 40 years of experience in providing efficient solutions for batching, micro, minor and bulk weighing systems, as well as plant automation. Sterling's state-of-the-art designs utilize the latest technology to provide specialized data management, raw material management, along with production data tracking. Sterling's engineers design complete processing systems and automation for various industries.
