

Today is the fructification of Frigate's unparalleled customer relationship and service.

placed a trial order on Frigate for supply of dampers in August, 2008 and Frigate did absolute justices by delivering 4 days before time (against a contractual delivery of only 12 days), which earned high praise from the client. The client was extremely happy to see European level quality of workmanship and invited Frigate to enter into a contract for supply of a pelletization disk.

This is an unique project in it's own way, as pelletization of by-pass dust is relatively unheard of.

The challenge as posed in this project included designing from scratch a single unit pelletization disk for 30 TPH which shall use only water and without any binders.

Frigate delivered a pelletization disk of 30 TPH of 4.5 m dia with a rotating speed of 9 rpm
